

Abstract

A computer-based educational system and method for presenting information. The system may include among others a content pane configured to present a presentation of a series of slides, and a progress control configured to adjust a user's progress through a currently displayed slide, a progress indicator configured to indicate a user's time-based
5 viewing progress through a slide, a presentation, or a series of presentations, and/or a link to a text transcript of any associated voiceover narration.
